                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for producing carotenoid compounds. The method comprises a transformed metabolising host cell, comprising suitable levels of isopenteryl pyrophosphate and a nucleic acid molecule encoding an enzyme in the carotenoid biosynthetic pathway, under the control of regulatory sequences, and contacting the host cell with carbon substrate to produce a carotenoid compound. The method is useful for producing carotenoid compound carid confluence and astaxanthin, by using microorganism having a nucleic acid molecule encoding enzymes in the carotenoid biosynthetic pathway and which metabolise single carbon substrates. The carotenoids have potent anti-oxidant properties useful in diet, and aquaculture elements. The carotenoids are also useful as intermediates in the synthesis of steroids flavours and fragrances and compounds for potential electro-optic applications. The present sequence in Methylomonas 16a sp. dimethylallyl diphosphate (lytB) enzyme used in the invertion
                                                                                            Methylomonas sp
                                                                                                                                                          Isoprenoid biosynthetic enzyme; isoprenoid compound; feed additive; keratenoid; pigment; flavour; fragrance; open reading frame 10; ORF10; lytB; IPP; isopentenyl diphosphate; dimethylallyl diphosphate.
                                                                                                                                                                                                                                                                                             Methylomonas 16a ORF10 lytB protein sequence.
                                                                                                                                                                                                                                                                                                                                                              15-JUL-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAU80334 standard; Protein; 318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 47; Page 123-124; 156pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Producing carotenoid compounds e.g. antheraxanthin and astaxanthin, by using microorganisms having a nucleic acid molecule encoding enzymes in the carotenoid biosynthetic pathway and which metabolize single carbon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                      encoding an isopremoid compound biosynthetic enzyme, and for the microbial production of isopremoid compounds. The molecules of the invention are also useful for regulating isopremoid biosynthesis in an organism and for producing recombinant organisms for producing various isopremoid compounds. The nucleic acid is also useful for feed additive, for the production of keratenoids and their derivatives, isopremoid intermediates, and as pure products useful as pigments, flavours and fragrances. The present amino acid sequence represents the Methylomonas 16a open reading frame 10 (ORF10) lyts protein of the invention, as described above. This sequence functions in the formation of IPP (isopentenyl diphosphate) and dimethylallyl diphosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a new nucleic acid molecule an isoprenoid biosynthetic enzyme isolated from Methylomonas. The invention is useful for obtaining a nucleic acid molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to enriching intermediates (A) in the mevalonate-independent isopremoid synthesis pathway (MEP-way) comprising deleting, inactivating or otherwise altering a gene (I) in the pathway, in a cell or organism, so that the enzymatic activity of the product of (I) is reduced or made non-natural. The method is used for production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                  (iii) as pharmaceuticals. Dead or live cells or organisms enriched in (A can be used similarly for treatment, in humans or animals, of asthma, Crohn's diseases, ulcerative colitis, multiple sclerosis, chronic bronchitis, (auto)immune diseases, allergies; bone diseases and osteoporosis, also a wide variety of other diseases and for improving the immune response against tumours. The present sequence is that of the Escherichia coli LytB protein, inactivated in examples of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (A), especially substrates of the GcpE and LytB enzymes that activate gamma/delta T cells. (A) and their derivatives are useful for:
(1) determining activity of GcpE and LytB, e.g. to identify their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 6-8; 10pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Escherichia coli; mevalonate-independent isoprenoid synthesis pathway; MEP-way; GcpE; LytB; T cell; asthma; Crohn's disease; multiple sclerosis; autoimmune disease; osteoporosis; tumour; antiasthmatic; antiulcer; antiinflammatory; neuroprotective; immunosuppressive; antiallergic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Enriching intermediates in the mevalonate-independent pathway of isoprenoid synthesis, useful for therapeutic activation of T cells, comprises altering enzymatic activity in the pathway
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Jomaa

                                                                                                                                                                                                                                                                  The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins a antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy sequences given in records ABP/6736-ABP81046 represent nucleic acid molecules of the invention.

                                                                                                                                                                                                                                            sequence. P. aeruginosa is an opportunistic human pathogen present in soil water and plants. The specification describes virulence polypeptides and mucleic acid sequence encoding such polypeptides. These sequences can be used to identify a compound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a P. aeruginosa infection.

note: the sequences given in the specification were poorly legible, and in some instances assumptions were made as to the identity of the residue; it is therefore possible that the sequence given below is
                                                                                                                                                                                                            Sequence

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne, CC pusculosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to CC downregulate expression and activity of P. acnes polypeptides and CC therefore treat P. acnes infections. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the present sequence is a protein described.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 compound, a vitamin, a cofactor, a polyketide, or an enzyme. The fine chemical production can be modulated. The presence of (1) or the SRT proteins (111) encoded by them are used for disgnosing the presence or activity of Corynebacterium diphtheriae. (1), (111), (111) and host cells containing them can be used to map the genomes of organisms related to C. glutamicum, to identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determination of SRT protein regions required for function, in modulating the SRT protein activity, and in modulating the activity of an SRT pathway. (11) are used to permit C. glutamicum to survive in an environment that is normally environmentally or chemically hazardous to it. (1) and protein molecules encoded by it increase the survivel of C. glutamicum to chemical and environmental hazards and provide a means for continued growth and environmental hazards show the fermentative growth conditions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               뮰
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           몺
                                                                                          polypeptide sequence that may be a drug target, or essential for growth or viability of an organism. Polymucleotide sequences AAH51947 - AAH52092 represent DNA encoding proteins AAG81096 - AAG81241, Mycobacterium tuberculosis proteins which are potential drug targets. The DNA and protein sequences are used to illustrate the method of the invention. The method involves providing an unknown nucleotide or polypeptide sequences, and comparing it to a number of sequences along with at least one algorithm capable of analysing a functional relationship between nucleotide and polypeptide sequences. The method is useful for characterising the function of nucleic acids and polypeptides that may be useful as a target for a drug or essential for the growth or viability of
       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 187; 207pp; English.

                                 method involves providing an unknown nucleotide or polypeptide sequences, and comparing it to a number of sequences along with at least one algorithm capable of analysing a functional relationship between nucleotide and polypeptide sequences. The method is useful for characterising the function of nucleic acids and polypeptides that may be useful as a target for a drug or essential for the growth or viability of
                                                                                                                     This invention relates to a method for identifying a nucleotide or polypeptide sequence that may be a drug target, or essential for growth or viability of an organism. Polymucleotide sequences AAH51947 - AAH52092 represent DNA encoding proteins AAG81096 - AAG81241, Mycobacterium tuberculosis proteins which are potential drug targets. The DNA and protein sequences are used to illustrate the method of the invention. The

Sequence

Ā

organism.

AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX391990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, simusitis, purulent otitis media, crythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel isolated polypeptides from Chlamydia pneumoniae. The polypeptides of the invention have antibiotic and antibacterial activity. The polypeptide or composition of the invention is useful for the prophylactic or therapeutic treatment of Chlamydial bacterial infection (specifically those caused by C. pneumoniae, C. psittaci or C. trachomatis), e.g. sinusitis, pharyngitis, bronchitis, pneumonitis, asthmatic bronchitis, adult-onset asthma, chronic obstructive pulmonary disease (COPD), atherogenesis or atherosclerosis. The sequences shown in ABB61993-ABB62011 represent proteins BVH-CPNI to
                                                                                                                                                                                                                                                                                                                                                                                                                                 ATP binding cassette; secretary locus open reading frame; endopeptidase; secretary locus ORF; protease; metalloprotease; CLP protease ATPase; CLP protease subunit; transglycolase/transpeptidase; CLPc protease; thioredoxin; Chlamydia infection; antibacterial.

The genes the invention encode an ATP binding cassette gene, a secretary locus open reading frame (ORP), an endopeptidase, a protease, a metalloprotease, CLP protease ATPase, a CLP protease subunit, a transglycolase/transpeptidase, a CLP protease, or thioredoxin. The genes of the invention can be used in a vector as a vaccine for the prevention and treatment of Chlamydia infections. Also described are prevention and treatment of Chlamydia infections.

CC The present invention describes a polynucleotide (I) comprising a CC sequences of a Bifidobacterium genome selected from the nucleotide CC sequences given in AB981842 and AB981843, or a sequence exhibiting at CC least 90% identity or which hybridises with the sequences given in CC AB981842 and AB981843. Also described is a polynucleotide (II) encoding CC affision protein, comprising a sequence selected from 1097 sequences GC given in AB98258 to ABP6354 ligated in frame to a polynucleotide (II) encoding a heterologous polypeptide. (I) has antidiarrheic and CC antibacterial activities, and can be used as an inhibitor of Salmonella. CC (I) (which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing CC the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) CC can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition concept from milk, yogurt, curd, cheese, fermented milks, milk based fermented products, incential, pet food or a pharmaceutical composition consposition selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the Sidobacterium related mucleotide sequences given in the Sequence of the milks of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequence of the sequenc

The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-NOV-1998;
